1.0 DESCRIPTION

This specification describes the GAYLE gate array IC used in the Amiga A600 and related systems. GAYLE shall be capable of operating a 68000 based Amiga with ECS chipset at a processor clock speed of 7.16 MHz. GAYLE shall provide the following functions:

- Address decoding and timing for:
  - system ROM, optional flash ROM, chip RAM, chip registers, 8520 CIA’s, real time clock (RTC), Credit card connector, IDE hard disk drive, and COM200020 ArcNet chip
- Generation of ECLK clock signal
- Data buffer control
- System RESET logic
- Floppy Glue

1.1 CONFIGURATION

This device shall be configured as a standard 84-pin plastic leaded chip carrier (PLCC) with pin configuration as in Figure 1 and dimensions as in Figure 2.

1.2 SOURCES

Refer to Approved Vendors List.

### 3.0 PHYSICAL REQUIREMENTS

#### 3.1 MARKING

Parts shall be marked with Manufacturer's Part Number, Manufacturer's Identification, and EIA Date Code.

#### 3.2 PACKAGING

The interconnected logic circuitry shall be contained in an 84-pin plastic leaded chip carrier (PLCC) plastic package with exterior dimensions per Figure 2.

### 4.0 ENVIRONMENTAL REQUIREMENTS

Units furnished to the requirements of this specification shall meet the following environmental resistance requirements (vendors shall furnish supporting documentation upon request):

Operating Temperature	0 to 70 deg. C
Operating Humidity	5 to 95% RH non-condensing
Operating Altitude	0 to 3000 meters
Storage Temperature	- 20 to + 85 deg. C
Storage Humidity	5 to 95% RH non-condensing
Storage Altitude	0 to 15,000 meters

#### 4.1 PROCESS QUALIFICATION TESTS

Integrated circuits supplied to the requirements of this specification shall meet the requirements of Engineering Policy No. 1.02.008. Supporting documentation shall be supplied by vendor upon request.

#### 4.2 ENVIRONMENTAL TEST CONDITIONS

Devices shall comply with the following environmental resistance tests per Commodore Engineering Policy 1.02.007.

1. Temperature/humidity (85 deg. C and 95% RH non-condensing) for 168 hours.
2. Operating life (1000 hours at 70 deg. C ambient temperature)
3. Solderability per MIL-STD-883, Method 2003
4. Pressure cooker (15 psig, 120 deg. C, and 100% RH for 24 hours)
5. Solvent resistance per MIL-STD-883, Method 2015, using water and trichloroethane
6. Solder temperature resistance (250 deg. C for five seconds)
7. ESD requirement MIL-STD 1686 Group 3

Note: Devices shall meet this specification's operating performance requirements after the above tests are completed.

#### 4.3 MINIMUM ACCEPTANCE LEVEL

The minimum acceptance level of any lot shall be an AQL of 0.65 as defined by MIL-STD 105 single sampling techniques.

#### 4.4 AGE OF DEVICES

Unit shall be rejected if EIA Date Code indicates an age of three (3) or more years.
